Deployability Scorecard

Filter AI Use Cases Before You Waste Time and Budget

Use this scorecard to evaluate whether an AI use case is deployment-ready. Run each use case through the five-point filter. If it doesn't pass at least 3 of 5—don't build it first.

The Deployability Criteria

Criteria	Yes	No
Solves a high-friction, high-cost problem	☐	☐
Uses structured or semi-structured data you already have	☐	☐
Has a clear internal owner (with decision power)	☐	☐
Can be tested in under 30 days	☐	☐
Doesn't require cross-department politics to approve	☐	☐

Scoring Guidance

✅ 5/5 – Greenlight it. Deploy now.
✅ 3–4/5 – Strong candidate. Prioritize and prep.
⚠️ 2 or less – Stall. You'll lose velocity.

This is how we qualify every use case before deploying BlackBox OS™.

Run this with your team. Filter the noise. Stack what moves.
